

Marine Equipment for Container Ships

With an experience of more than 130 years Noske-Kaeser is one of the most successful suppliers of marine equipment. As a reliable partner of the shipbuilding industry Noske-Kaeser provides customized, innovative economical solutions in the fields of air conditioning, ventilation, fire fighting, refrigeration and heating.

With high-quality products and a competent service the company has developed quality standards setting new benchmarks worldwide. Noske-Kaeser stands for safety and reliability with which you can confidently set sail.

Noske-Kaeser supplies compact provision cooling plants with separate circuits for cooling and freezing and an integrated stand-by unit for passenger ships and yachts.

Air Conditioning and Ventilation

More than 1.500 Noske-Kaeser air conditioning and ventilation systems are in service on container and passenger ships, yachts, tankers and bulk carriers all over the world.

Due to their modular design, the components and plants developed by Noske-Kaeser can be adapted to any environment. They comply with the appropriate national and international standards. Individually produced they combine high-tech with safety, reliability and comfort.

Noske-Kaeser offers air conditioning plants with integrated compressor and condenser modules for container ships and tankers. The compact plants are delivered ready to be connected to power, air, steam or hot water as requested by the customer.

Refrigeration

Noske-Kaeser develops and provides refrigeration plants of various designs optimally adapted to marine specifications. Especially the direct evaporation cooling plants, the compact cold water sets and the cargo cooling plants are renowned achievements pointing the way.

Noske-Kaeser equipment is characterized by vibration-free and low-noise operation, light weight and an operator-friendly, compact design. In addition, the plants feature a very high quality and require little servicing. They all comply with the rules and regulations of the international classification societies and are delivered together with the required certificates.

Fire Fighting

Noske-Kaeser fire-fighting equipment is installed on numerous types of ships. The range of services comprises expert consultation, design, installation and repair of various types of fire-fighting equipment including sprinkler, water fog and CO₂ plants for service and cargo rooms as well as smoke detection systems.

All these systems comply with the state of the art and, of course, meet the requirements of the classification societies.

CO₂ plants are still the most common solution for fire fighting in service and cargo rooms on board ship. CO₂ plants delivered by Noske-Kaeser have proven on all types of ships.

The Noske-Kaeser program for container ships is not restricted to the required air conditioning and refrigeration plants: The program is completed by integrated and pre-constructed refrigeration units for containers including world-wide service.

The reference list of Noske-Kaeser also includes container vessels transporting standard containers as well as reefer and deep-freeze containers.

Systems and Components

-  Air conditioning
-  Ventilation
-  Air treatment
-  Air cooling
-  Provision refrigeration
-  Cargo refrigeration
-  Container refrigeration
-  Fire fighting
-  Cold and hot water
-  Piping
-  Tanks

Service

-  Customer service
-  Servicing
-  Repair
-  Conversion
-  Container maintenance
-  Spare parts
-  Logistics

Piping

Noske-Kaeser is an experienced specialist as concerns the design, conversion and repair of pipe systems. Based on specifications for merchant and naval shipbuilding the company designs pipe systems for almost all media, pressures and temperatures.
